Covering Your Tracks Project

Step 1: Sign into your Windows VM [Picture Capture] – 20 points

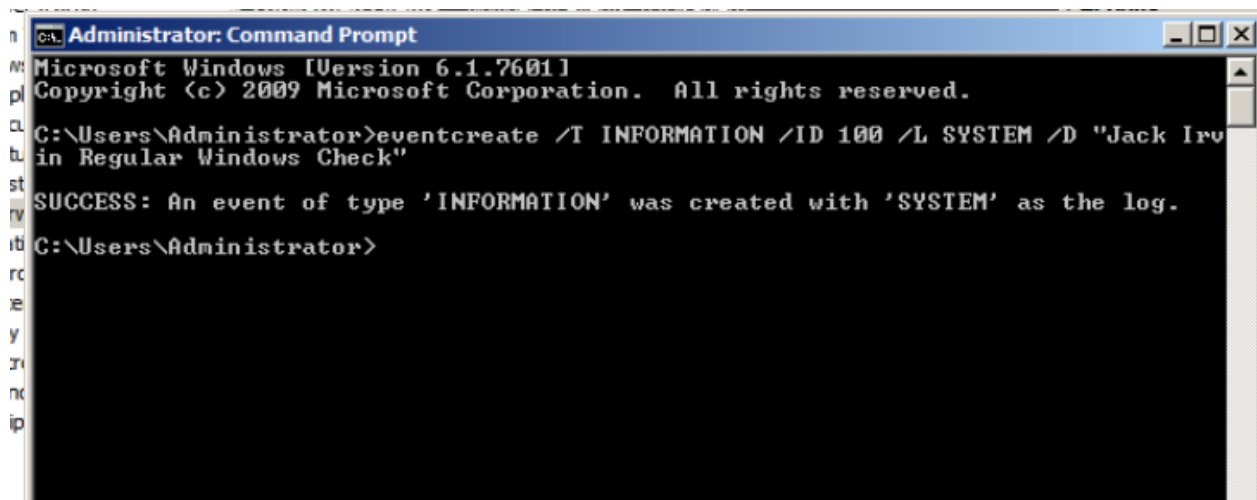

You are establishing the current status and creating a backup

- Find out where Event Viewer is and look at the latest logs for Application, System, and Security

- Open your cmd prompt and type:
o eventcreate /T INFORMATION /ID 100 /L SYSTEM /D “Your Full Name Regular Windows Check”

- o copy C:\WINDOWS\System32\winevt\Logs\System.evtx “C:\Users\Administrator\My Documents\”

Step 2: Now you are doing your “Hack” [Picture Capture] – 40 points

```
C:\Users\Administrator>copy C:\WINDOWS\System32\winevt\Logs\System.evtx "C:\Users\Administrator\My Documents\"
1 file(s) copied.

C:\Users\Administrator>
```

- Find a way to STOP the print spooler service.

```
C:\Users\Administrator>net stop spooler
The Print Spooler service is stopping.
The Print Spooler service was stopped successfully.
```

- Once complete run the following two commands:
 - o eventcreate /T ERROR /ID 200 /L SYSTEM /D "Your Full Name STOPPED THE PRINT SPOOLER"

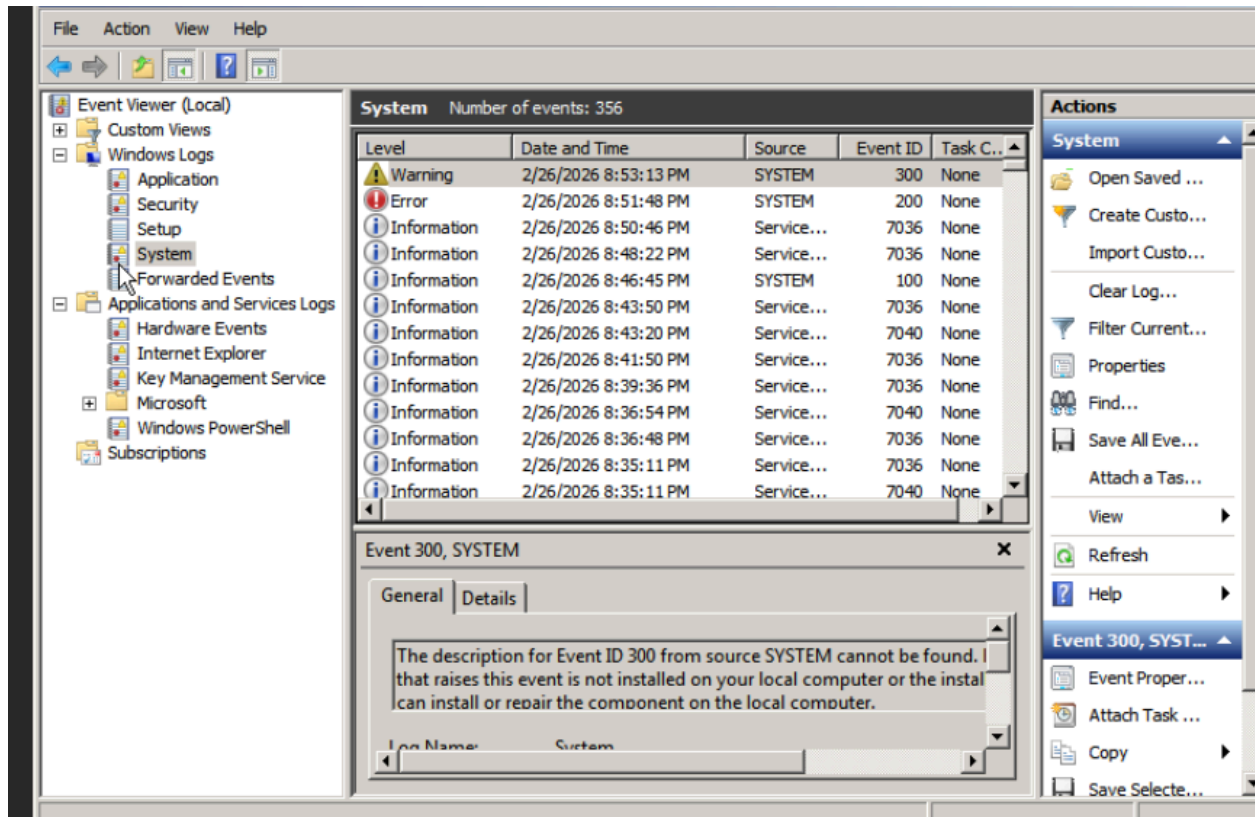

```
C:\Users\Administrator>eventcreate /T ERROR /ID 200 /L SYSTEM /D "Your Full Name STOPPED THE PRINT SPOOLER"
SUCCESS: An event of type 'ERROR' was created with 'SYSTEM' as the log.
```

- o eventcreate /T WARNING /ID 300 /L SYSTEM /D "Your Full Name – JUST HACKED THE SYSTEM"

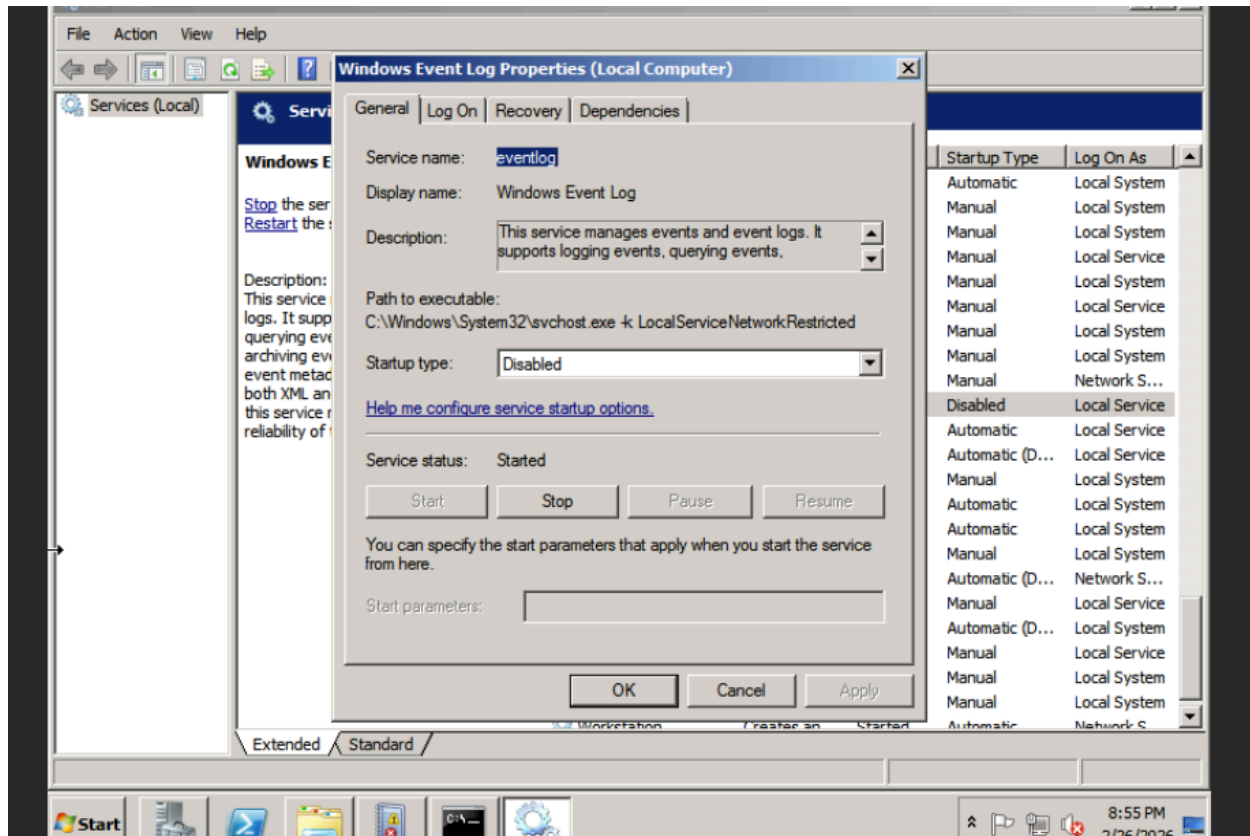

```
C:\Users\Administrator>eventcreate /T WARNING /ID 300 /L SYSTEM /D "Your Full Name – JUST HACKED THE SYSTEM"
SUCCESS: An event of type 'WARNING' was created with 'SYSTEM' as the log.

C:\Users\Administrator>
```

- Once that is done refresh event viewer to see if you see the new logs. Also, while you are there check out the event/log you created in step 1.

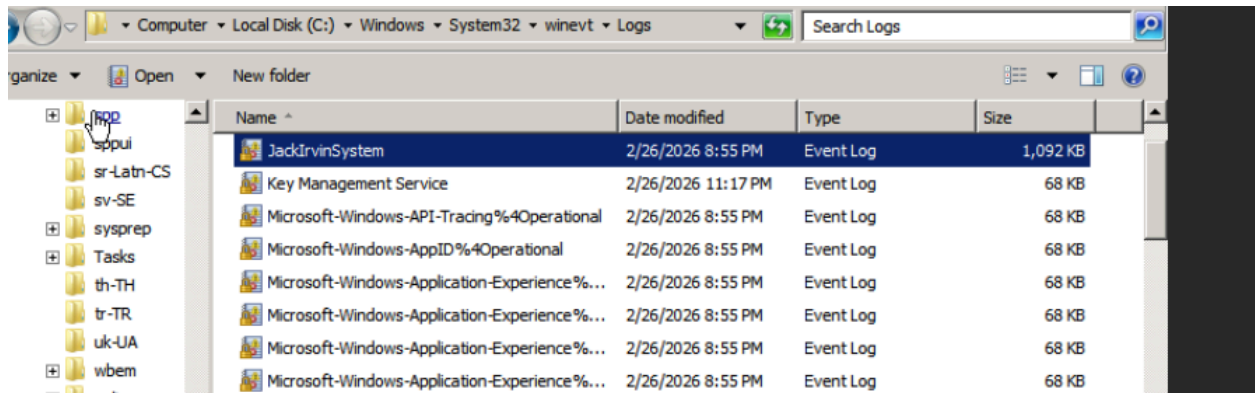

- Now find a way to DISABLE the Event Log service (GUI ONLY)

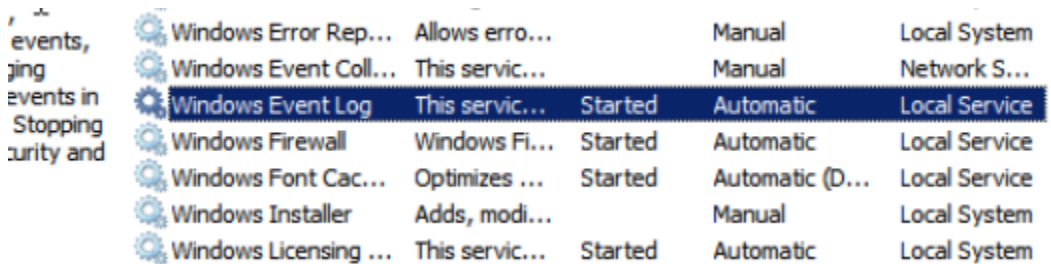

- Once that is done type in the following command within the cmd prompt:
 - o Shutdown -r -t 5

Step 3: Covering your Tracks [Picture Capture] – 40 points

- Manual go to the folder (GUI ONLY):
 - o WINDOWS
 - o then System32
 - o then winevt
 - o then Logs
- Rename System.evtx to YOURINITIALSSystem.evtx

- Now copy your System.evtx from your 'My Documents' folder into this location. You can do this GUI or using cmd prompt. (Try not to mix them up)
- Re-enable the Event Log Service

- Once that is done type in the following command within the cmd prompt:
o Shutdown -r -t 5
- Check out Event Viewer to see if your HACK is still there
o If done correctly, no error or warning log that you created should be there.
